

#4008 UNIVERSAL EXHAUST SYSTEM SHOCK MOUNT KIT

A must accessory for isolating your exhaust system from hi-frequency vibration and minimizing damage from impact. Use this kit to mount most tuned mufflers (such as Magna-Nitro pipes #3961, 3961-1, 3980 and Hattori 666, 669, 672, 650 and other 40.0mm O.D. pipes) and tuned pipes (such as Magna-Pipe #3651 and Hattori #638 "U" shaped pipes). [SPECIAL NOTE: Of the V-Tech series of tuned pipes, only the .20 size can utilize the strap provided, installation of .40 or .60 V-Tech pipes require that a longer strap be fabricated from strap metal or soft wire such as coat hanger wire.]

Study the drawing for the basic installation. It is recommended that you form the 2.0mm wire in a smooth 180 degree arc allowing at least 8.0mm or straight wire at each end for insertion into each stand-off. However, the actual shape of the wire can be more or less of an arc depending on your requirements. Each stand-off can be rotated to suit your installation. Loctite all mounting points except either ends of the rubber shock mount and the M4x6 Phillips screws holding the strap (Loctite would render them difficult to disassemble later for service and is not required).
